NGO ANH TUAN

FULL-STACK DEVELOPER | SOFTWARE ENGINEER

0917940833 | ngoanhtuan23.it@gmail.com | Ho Chi Minh City, Vietnam
Portfolio: tuandacadev.vercel.app | GitHub: github.com/Tuandaca

PROFESSIONAL SUMMARY

Full-stack developer with 2 years of hands-on, project-based experience building web applications and AI-enabled prototypes, complemented by experience in a university IT department. Works across ASP.NET Core, Vue.js, Next.js, Node.js/NestJS, REST APIs, and relational databases. Familiar with RAG and Knowledge Graph workflows. Uses AI coding agents to speed up scaffolding, debugging, refactoring, and documentation, while reviewing generated code and validating behavior before integration.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, Python, SQL
Backend & APIs: ASP.NET Core, Node.js, NestJS, FastAPI, RESTful APIs
Frontend: Next.js, React, Vue.js, Tailwind CSS
Data & Infrastructure: SQL Server, PostgreSQL, MongoDB, Neo4j, Prisma, Redis, Git, Docker
AI & Engineering Workflow: RAG, LLM integration, Knowledge Graph, FAISS, AI coding agents (Antigravity), Gemini; UML, API testing, debugging, refactoring

EXPERIENCE

Web Data Evaluator (Freelance) | Rating Task · 2021–2025
Freelancer

- Evaluated web page quality, relevance, and search intent alignment according to detailed standardized guidelines.
- Analyzed digital content to assess information accuracy, authority, and data trustworthiness.

Software Developer | IT Department, Van Lang University · 2025–2026

- Contributed to a web platform that helps students find university information and ask or answer study-related questions.
- Designed and documented system behavior using Use Case, Class, and Sequence diagrams; translated requirements into implementation tasks.
- Worked with ASP.NET Core/.NET APIs, Vue.js, and SQL Server; supported functional testing, debugging, and iterative improvements with the mentor and team.

SELECTED PROJECTS

Cinema - Movie Ticket Booking Platform | Personal Project · GitHub

- Developed a full-stack cinema booking concept covering seat selection, reservations, order management, and AI-assisted movie guidance/recommendations.
- Stack: Next.js, TypeScript, NestJS, PostgreSQL, Prisma, Redis, Socket.IO, AI/LLM. Repository: github.com/Tuandaca/cinema

Travel AI - RAG & Knowledge Graph QA | Capstone Project · Sep–Dec 2025

- Prototyped a question-answering system for Ho Chi Minh City transport, culture, and tourism, combining retrieval-augmented generation with Knowledge Graph concepts for context-aware results.
- Prepared PDF/JSON/Excel source data, generated multilingual sentence embeddings, and built a FAISS-based retrieval pipeline; explored LLM integration and evaluation with Recall@k, nDCG@10, and latency targets.
- Stack: Python, FastAPI, sentence-transformers, FAISS, RAG, Knowledge Graph/Neo4j, LLM. Repository: github.com/Tuandaca/DACNTT

AI-AUGMENTED DEVELOPMENT

Apply agent-assisted workflows for boilerplate generation, error investigation, refactoring suggestions, test ideas, and technical documentation. Keep development accountable through code review, running the application, and validating API/UI behavior instead of accepting generated output blindly.

EDUCATION & CERTIFICATION

Bachelor of Software Engineering | Ton Duc Thang University | 2021–2026 | GPA: 7.01/10
Aptis ESOL - Level B2 (2024)
